1.1. What type of supervised learning are you in? From regression

- -1.2. Declare how you will define your data set D with feature space X and label space Y. Also, give an example to illustrate a sample in D.
  - 1.3. Describe how would you collect the data set D?

2. Suppose we have 5 data points of the set Dthe hypothesis class  $\mathcal{H} = \{h_1, h_2, h_3\}$  in the following plot.
